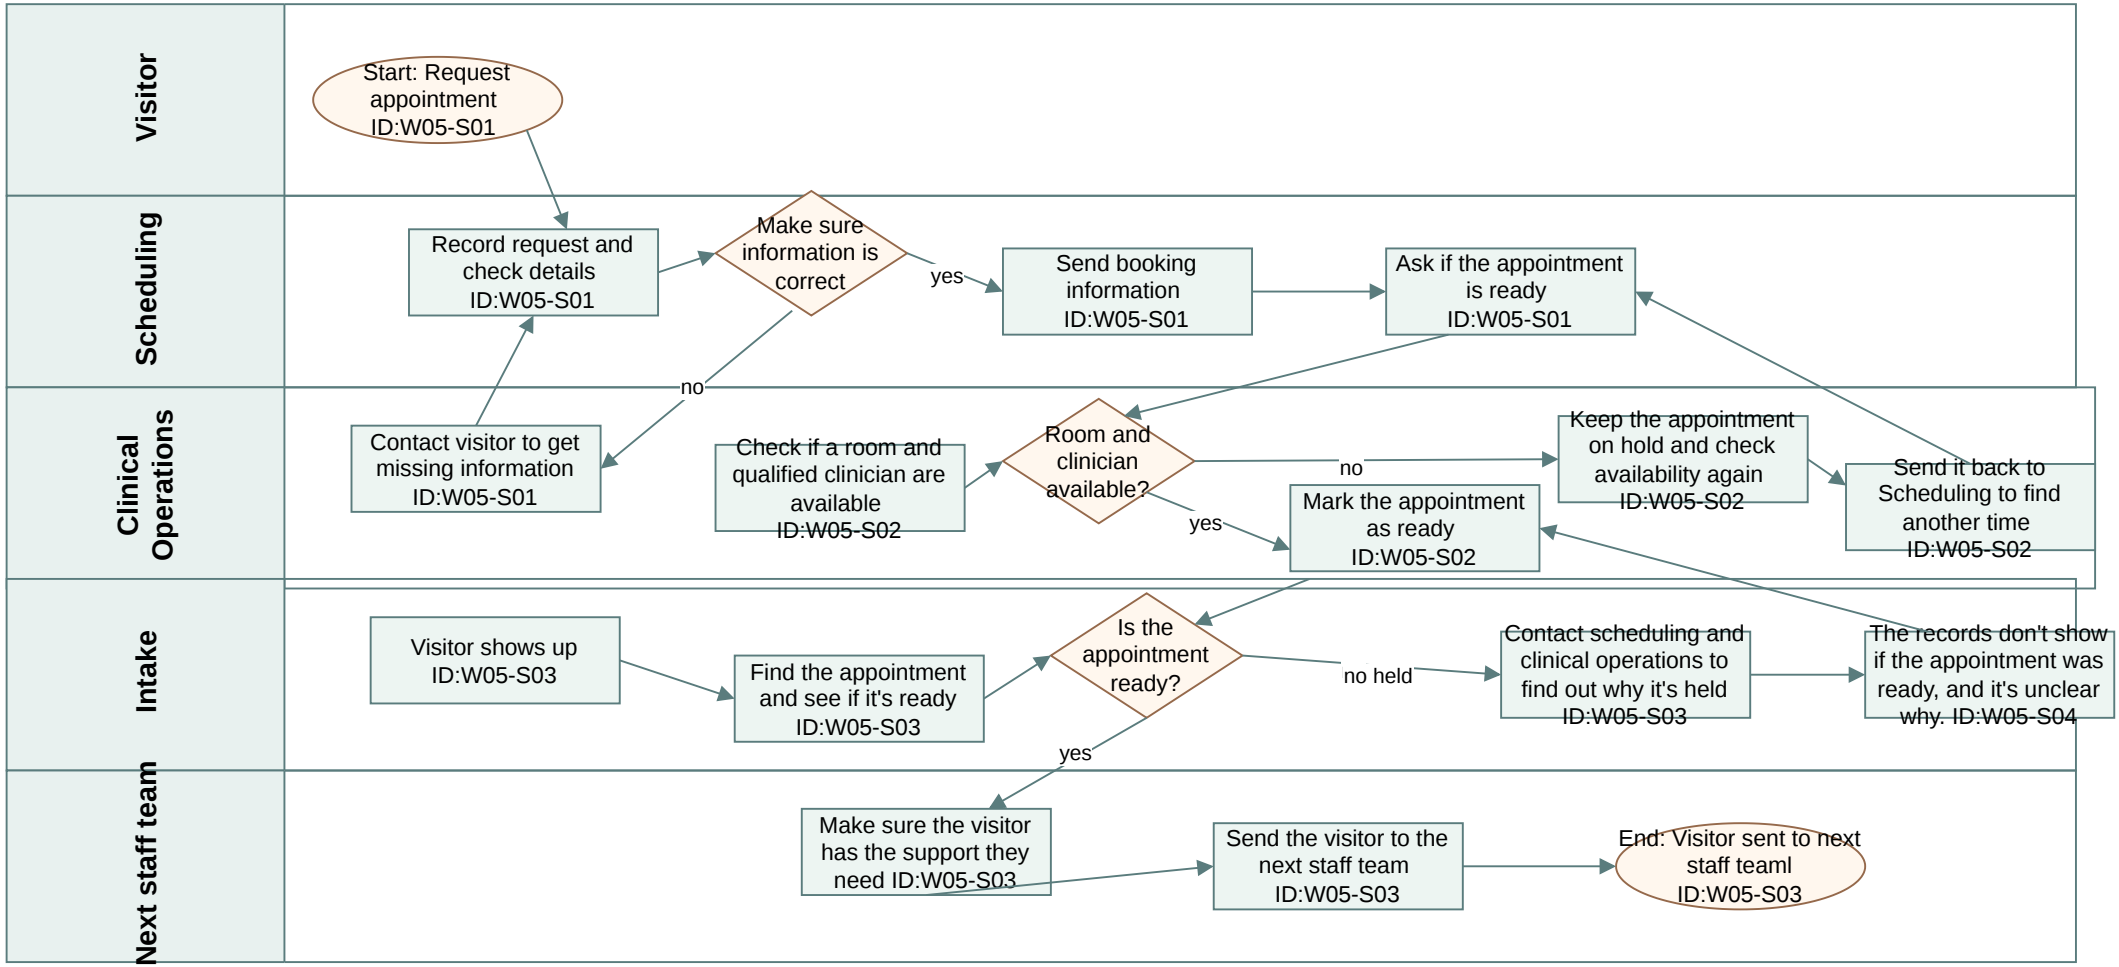
CIT 140 · Week 5 | Current Appointment Process

The visitor requests an appointment then the scheduling checks the details and clinical operations checks if it's ready. When the visitor shows up intake checks the status, if it's ready then they move forward. If not, staff find out why.



Week 5 | Scope and Findings

1 · Process scope
Andy Castillo
This diagram shows how an appointment goes from booking to intake. It starts when someone requests an appointment and ends when they're sent to the next staff team. It includes the visitor, scheduling, clinical operations, intake, and the next staff team. It doesn't show what happens after that.

2 · Check the two paths

For a ordinary appointment what would happen is someone schedules a appointment, scheduling will then check the information and clinical operations would make sure a room and clinician are available. When the visitor shows up, intake checks if the appointment is ready in which if it is then they proceed to the next step. In the gap, a visitor got a booking confirmation, but when they showed up the appointment was still held. The records don't show if a decision was made, and we're unsure as to why.

3 · Evidence and model review

W05-S01 shows what scheduling does, W05-S02 shows how Clinical Operations checks if a room and clinician are available, W05-S03 shows what intake does when the visitor arrives and then W05-S04 shows what happened during the situation. I added the booking confirmation and made sure the appointment isn't marked ready unless there is a room and clinician are available. We're still unsure as to why the final readiness decision wasn't shown so scheduling and clinical operations would need to check the records to find out.

4 · Learning reflection (reuse your Discord paragraph)

The appointment process became much cleared to me on how it goes through different departments before the visitor can move forward. I also learned that getting a booking confirmation doesn't mean the appointment is ready. The records don't explain why Intake still showed held. Week 4 talked about what the clinic needs whileas week 5 is about how the process works step by step including yes/no options.

5 · Portfolio evidence
[Editable model filename and Week05/Evidence/Week05_Discord_Post.png or .jpg. If Discord is unavailable, identify the equivalent reflection used here.]
Save the .drawio file; export both pages as one PDF; check readability; commit and push.
