Stakeholder Map

Who has a stake? - Andy C. · Revision 309

Proposed QA Control Review / participation and decision rights

PEOPLE	RELATIONSHIPS	NEXT CONVERSATIONS
Who is affected?	Who contributes and decides?	What needs confirmation?

1. People and roles

QA and night-shift operators

Nia supervises night QA and the operators perform the checks and record exceptions. She wants the original evidence preserved and the review planned around their work schedule. A night-shift operator should also be involved but one has not been selected or interviewed yet. Nia can give input on the workflow, but she cannot approve funding or a restart

Engineering

Elias can explain the command and scheduler records and help check the technical information. He needs read only exports with source details and wants the record custodian involved before delivery dates are set. He can advise on technical feasibility, but he cannot confirm where the repeated command came from or authorize spending.

Operations

Mara helps organize the review and helps organize who needs to be involved. She can confirm who needs to be contacted but she cannot approve the project or spending. The sponsor has to approve it but we still need to confirm who that is.

Sponsor and record custodian

The sponsor is responsible for approving the review but we still need to find out who the sponsor is and what they can approve. We also need to find out who the record custodian is and confirm their responsibility.

2. Relationships and next steps

Competing needs and tradeoff

A daytime meeting could work for Operations but it might not work for the night-shift operators because of their shift duties. The review should work around their schedule so both Operations and night QA can give their input. The team should ask what time works before assuming anyone can attend.

Consultation plan

The review should include Nia and a night-shift operator for QA, Elias and the record custodian for the records, and Mara for Operations. We also need to confirm who the sponsor is and what they can approve. Each person should be consulted before the review so we know what they need and what they can decide. We should also ask what they need from the other people involved to do their part. We should still include the people with little formal authority because they’re the ones doing the work, so we should get their advice and critiques on the plan.

Missing voices and validation

A night shift operator still needs to be selected and heard and the record custodian needs to confirm the source details and access arrangements. Nia should confirm the operator and Elias should confirm the record custodian and access. Their answers should be recorded and we should not assume they agreed until they confirm it.

Next step toward requirements

We need to confirm the missing people, who has approval, and who needs to be involved. The map helps us know who to talk to and what to ask them. This makes sure the right people are heard, but it does not mean they agreed or that the project is approved.

3. Book evidence connection

Book form connection

The questions improved my consultation plan by helping me ask what each person needs from the other person involved to do their part. This can help me understand what each person needs before moving forward.
