CIT 140 · Week 6 · System boundary

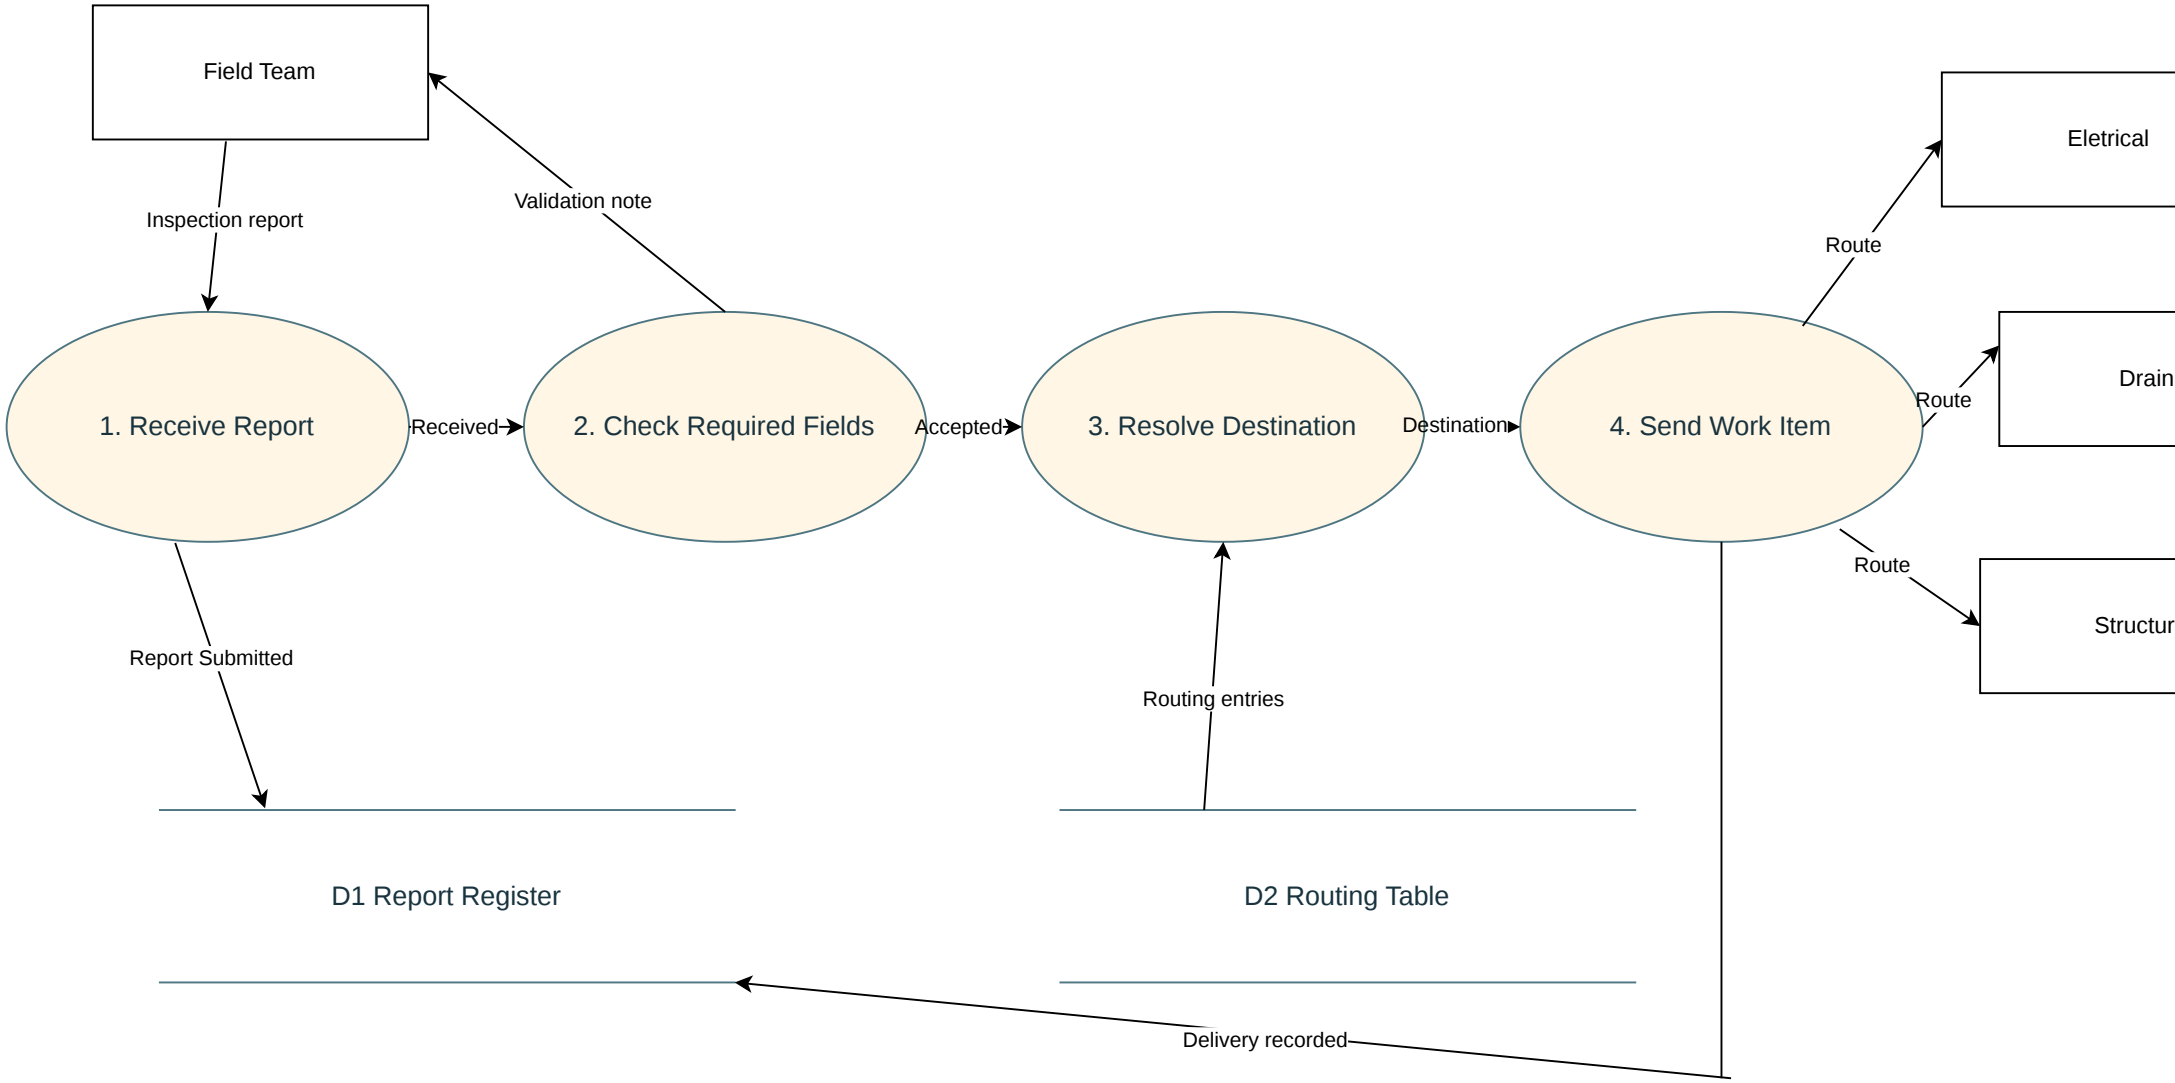

Inside: Receiving reports, checking the information, figuring out which department they go to and sending the work items.

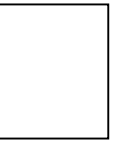

Outside: Inspecting things in the field, controlling drone flights, making repairs and updating the routing table

CIT 140 · Week 6 · Information movement

The field team sends the report to the system where it gets saved and checked. If everything is correct, the system figures out which department it goes to, sends it over, and keeps a record of where it went.

CIT 140 · Week 6 · Definitions and finding

Field	Meaning	Example	Allowed value / format	Source
report_id	The ID for each report	CJ-696	CJ- followed by 3 numbers	W06-S02
asset_id	The ID of what was inspected	AC-696	2 letters followed by 3 numbers	W06-S02
asset_type	What type of thing was inspected	STREETLIGHT	STREETLIGHT, DRAIN, BRIDGE	W06-S02
finding_code	What problem was found	LAMP_OUT	LAMP_OUT, BLOCKED, SURFACE_DAMAGE	W06-S02
priority	How urgent the problem is	ROUTINE	ROUTINE or URGENT	W06-S02
captured_at	When the report was recorded	2026-10-28T02:03:00Z	YYYY-MM-DDTHH:MM:SSZ (UTC)	W06-S02
photo_ref	The ID for the photo	IMG-696	IMG- followed by 3 numbers	W06-S02
survey_area	The area that was inspected	NORTH	NORTH, CENTRAL, SOUTH	W06-S02

Finding: Report CJ-603 was supposed to go to structures because it was for a bridge, but it went to electrical instead. The report was accepted but sent to the wrong department.

Unanswered question: Why did the bridge report go to electrical instead of structures? We would need to check the routing table to see why it happened.
